Directions for Q. Nos. 71 to 75 :

In recent years, the rapid integration of artificial intelligence (AI) into daily life has sparked a global debate regarding its long-term societal impacts. Proponents of AI argue that machine learning algorithms and automation can drastically enhance efficiency across various sectors, from healthcare diagnostics to logistical management. By processing colossal datasets at unprecedented speeds, AI enables professionals to make data-driven decisions that were previously unthinkable. Furthermore, AI-driven tools have the potential to democratize information, breaking down complex barriers in education and allowing for highly personalized learning experiences.

However, this rapid technological advancement brings significant challenges. Critics are increasingly vocal about the ethical implications of AI, particularly concerning data privacy, algorithmic bias, and the displacement of the workforce. As machines take over routine and complex cognitive tasks alike, there is a looming threat of large-scale unemployment if the labor market fails to adapt. Additionally, the proliferation of generative AI has made the authentication of digital content remarkably difficult, raising alarms about the spread of misinformation and the erosion of digital trust.

Ultimately, the successful integration of AI does not hinge solely on technological innovation, but rather on robust regulatory frameworks and ethical oversight. Policymakers and technologists must collaborate to ensure that AI systems are transparent, accountable, and designed to augment human potential rather than undermine it. The goal is to cultivate an ecosystem where innovation thrives alongside societal well-being.

71. According to the passage, what is a primary advantage of Artificial Intelligence?
- (A) It completely eliminates the need for human professionals in specialized fields.
 - (B) It can process vast datasets quickly to facilitate data-driven decisions.
 - (C) It automatically resolves global misinformation through advanced fact-checking.
 - (D) It creates a perfectly equitable labour market across all global sectors.
72. What is the author's primary concern regarding the workforce?
- (A) AI will cause a shortage of highly skilled workers in the technological sector.
 - (B) Humans will refuse to use AI tools for complex cognitive tasks.
 - (C) The labour market may not adapt quickly enough, leading to widespread unemployment.
 - (D) AI systems will demand higher wages than human employees.

73. Which of the following is an implication of generative AI mentioned in the passage?
- (A) It makes it harder to verify the authenticity of digital content.
 - (B) It eliminates all forms of algorithmic bias in decision-making.
 - (C) It helps lawmakers draft better regulatory policies.
 - (D) It makes educational resources excessively expensive.
74. According to the passage, what is required for the successful integration of AI?
- (A) Halting technological innovation until all machines are perfect.
 - (B) Leaving the development of AI entirely in the hands of the market.
 - (C) Establishing transparent regulatory frameworks and ethical oversight.
 - (D) Prioritizing economic efficiency over data privacy and security.
